Now, some *Date Assassin* exercises.

[js]

// Get the first Monday of the year

Date.january().first().monday()

// Get the last Friday of the year

Date.dec().final().fri()

// Set a date to the 15th of the current month at 4:30 PM,

// then add 90 days and make sure that date is a weekday,

// else move to the next weekday.

var d1 = Date.today()

.set({ day: 15, hour: 16, minute: 30 })

.add({ days: 90 })

if (!d1.isWeekday()) {

d1.next().monday();

}
